[3] Waste (WS)

[3.5] Inorganic Waste Treatment

Figure 1. The use of Separate Garbage Bin between organic and unorganic waste

Figure 2. The recycle of inorganic waste (used bottles and used rubbers) for gardening as innovative products created by the new students in student orientation programme

Description:

For a successful plastic recycling program, Sebelas Maret University must have an on-site system for:

- Collecting and storing plastics.
- Separating the plastics into different types.
- Ensuring the recycled plastics are dry and clean.

UNS implements inorganic waste treatment by several efforts : 1) The use of Separate Garbage Bin between organic and unorganic waste in almost 100% usage in all faculties; 2) The recycle of inorganic waste (used bottles and used rubbers) for gardening as innovative products created by the new students in student orientation programme. This program is a part of 3R Program (Reduce, Reuse and Recycle).
